---

**1: Built-in Ecommerce**

SSL connectivity to a variety of credit card processors. When implemented, you will be able to create an installer that allows users to 1) install a demo and/or, 2) purchase your software from their desktop. You will be required to establish a merchant account with one of the available credit card processors before this feature will be fully enabled.

---

**2: Tutorials**

How to create and work with Install Factory.

---

**3: Flow Charts**

Detailed explanation of the possible paths through an installer and how each path is triggered either from within the development environment or based upon the state of the user's computer when an installer is run.

---

**4: Modifiable Fonts and Sizes**

The ability to select the Font and Size of the standard display in the Install Factory, Admin Tool and in the created installers.

---

**5: Modifiable Registration Survey**

The ability to change the text labels of the registration survey and the ability to send the registration data to an email address in addition to the Install Factory server.

---

**6: Better Compression**

Improve the size of built installers.

---

**7: Automatic Uninstall**

The ability to automatically uninstall the files from a user's computer. Compatibility with Windows Add/Remove Programs.

---

## **8: Simplify the Lock Point Expander and Example Tools**

Move these tools into the Install Factory application. Improve the interface to provide a more clear explanation of how the whole process works and how it can be tested during installer development.

---

## **9: OSX Installer Interface**

A wizard interface that looks like the Apple OSX installer.

---

## **10: Standalone Server**

A free-standing server application for Mac and Windows computers that allows users to utilize the Internet to connect to an unlock installers without using the Install Factory server. This server application would reside on your computer hardware, not ours.

---

## **11: Handle Multiple 'Found' Items**

When multiple items are located by a Find Action, list the found items and allow the user to choose the appropriate one.

---

## **12: FTP Action**

Allow the installer to reference a file on an internet server and treat it as though it were local to the installer. Permits you to update your files without having to recreate your installer.

---

## **13: http Action**

Allow the installer to display a web page during installation. The page could be local to the installer or referenced from the Internet.

---

## **14: Edit Text Files**

The ability to edit text files (like .ini files) from within the installer.

---

**15: Create Path as Needed**

If the user types in an install path, create the intermediate folders as needed.

---

**16: Billboards**

Ability to display multiple pictures during installation.

---

**17: Packages**

Ability to create separate install packages or groups of files expected in Windows installers. Examples would be "Custom", "Typical" and "Minimal".

---

**18: Better Verify Features**

Improve the ability to diagnose and repair missing files and items referred to by Actions.

---

**19: HTML Help System**

Online help for Install Factory.

---

**20: Localization Options**

Multiple Language options for Install Factory.

---

**21: Build Log**

A file to document what was built into an installer. Itemize logic and file steps and record detailed file information for later reference.

---

**22: Cancel Looking for Missing Files**

A global cancel to stop looking for missing files when opening an archive.

---

## **23: List All Screens**

Make all installer interface screens editable in a single location.

-----

**All comments and suggestions are welcome.  
Some of the best features in Install Factory came from user suggestions.**
